KSB Introduces Super-Size Sewatec Wastewater Pumps

Mississauga, Ontario, October 2017 – KSB's Sewatec pumps have established a strong reputation as highly reliable, highly efficient dry-installed pumps for wastewater transport applications. Now, in response to the worldwide trend towards larger wastewater treatment projects, KSB has extended its Sewatec pump series with fifteen new extra-large models. The maximum flow rate of the largest version will be up to 33,000 m³/h with a drive rating exceeding 6 megawatt.

The Sewatec type series comprises horizontally or vertically installed, single-stage volute casing pumps in back pull-out design. They can be fitted with a variety of impeller types, such as high-efficiency multi-channel impellers, single-vane impellers or free-flow vortex impellers.

Like all Sewatec pumps, these new models feature a replaceable casing wear ring. Grease-packed rolling element bearings, re-lubricated or sealed for life, absorb the bearing forces. A range of shaft seals is available, including various bi-directional mechanical seals and several gland-packing options.

About KSB

KSB Pumps Inc., based in Mississauga, ON, is a member of the KSB Group, one of the world's largest manufacturers of pumps, valves and systems. KSB's history dates back to 1871 in Germany, where the company's global HQ is still located. In the 2016 fiscal year, KSB generated sales revenues of € 2.155 billion with a global workforce of 15,488 employees. KSB's giant product portfolio consists of more than 3,000 different off-the-shelf pumps and valves – and thousands of engineered and customized solutions. KSB Canada has specialized in providing reliable pump solutions for the most challenging applications in industrial and utility power plants, environmental (water and wastewater) facilities, mining and industrial processes. It also offers full commissioning support, maintenance, repair and re-building services for pumps from KSB and other manufacturers.
